SUMMARY

Final-year Computer Science student (graduating June 2027) with experience in full-stack development, backend systems, and AI/LLM applications. I co-founded a cloud workstation platform, have built software across several domains, and won a national-level ideathon. I'm interested in Agentic AI and Natural Language Understanding, and I'm looking for an internship where I can contribute to real projects.

EXPERIENCE

Virga.tech — *Co-Founder & Chief Operating Officer*

2021 - 2025

- Came up with and launched a cloud workstation platform for GPU-heavy work such as game development, 3D rendering, and content creation.
- Built the MVP on cloud infrastructure with containerization so users could get compute resources on demand.
- Led a cross-functional team, managed the technical roadmap, and helped make market decisions.
- Worked across the full product lifecycle, from infrastructure design to cloud service integration.

Self-employed — *Freelance Software Developer*

2022 - PRESENT

- Delivered custom software for clients across different domains, including web applications, backend APIs, and blockchain-based solutions.
- Worked directly with clients on requirements, design, and deployment.

Self-directed — *Open Source Contributor*

2021 - PRESENT

- Built personal and open-source projects across web, AI/ML, blockchain, and gaming, and kept an active GitHub profile.

EDUCATION

St. Joseph's College of Engineering and Technology, Palai, Kerala — *B.Tech in Computer Science and Engineering*

2023 - 2027

Final year. Expected graduation: May 2027.

PROJECTS

Navez: Smart Travel Companion — *Academic Mini Project*

KOTLIN, NODE.JS, EXPRESS, POSTGRESQL, WEBSOCKETS

- Built a multi-modal travel app that brings bus, metro, and ferry routes across Kerala into one place for journey planning.
- Developed a real-time backend that handles live bus tracking, route optimization, and vehicle simulation over WebSockets.
- Implemented a seating recommendation feature that uses sun-position calculations to suggest the shaded side of the bus.

SKILLS

Backend Node.js, Express.js, FastAPI, Python

Databases PostgreSQL, MySQL, Firebase, data modeling, query optimization

Frontend and mobile React, HTML5, CSS3, Kotlin (Android)

Cloud and DevOps AWS, DigitalOcean, Heroku, deployment automation

AI LLM APIs (Groq, Gemini), prompt engineering, Agentic AI design, NLP, conversational systems

Architecture REST API design, WebSockets, real-time systems, blockchain, system design

Languages and tools Python (advanced), Java, C, JavaScript, PHP, Git, GitHub,

AWARDS

National-level ideathon winner. Won a national-level ideathon.

College-level SIH 2024-25 winner. Won the Smart India Hackathon at college level.

Hackathon participant. CODE-OF-DUTY and MITS Eneriya 2025.

- Designed a GPS proximity alarm with background location tracking, plus a one-tap SOS that shares the user's live location with emergency contacts by SMS.

LLM-Based Intelligent Systems — *Personal Projects*

PYTHON, FASTAPI, GROQ API, GEMINI API

- Built several LLM-powered applications on the free tiers of the Groq and Gemini APIs to keep costs low.
- Implemented conversational systems with context management, prompt optimization, and API integration.
- Deployed to AWS, Heroku, and DigitalOcean while handling API rate limits and costs.

Blockchain-Based Credential System — *SIH 2024-25, College-Level Winner*

PYTHON, BLOCKCHAIN

- Designed and built a certificate issuance and verification system on blockchain for immutability and transparency.
- Wrote the certificate generation logic with cryptographic hashing so issued credentials are tracked and protected from tampering.

Code of Duty — *MITS Eneriya Hackathon 2025*

PYTHON

- Built a project at the hackathon that uses AI to suggest food recipes based on ingredients that are close to expiry.

Weather Prediction System — *Year 1 Project*

NASA POWER API

- Built a weather prediction system that fetches and analyzes climate data from the NASA POWER API, with visualizations of forecasts and historical trends.
